

TRANSFORMING QUALITY...

We strive to be a trusted partner, operating in compliance with regulations and managing quality processes powered by data-driven science, to address patient needs.

We will achieve this through use of an effective Quality Management System, by fostering a desired Quality Culture, by harnessing the collective power of our People, and by embracing and enabling Innovation and Technology.

We will do this altogether, as every individual has the power to influence quality, compliance and performance.

Although progress in medicines relieves human suffering and enables longer life, rising healthcare costs create economic difficulties for individuals and nations, which lead to immense challenges for market access. The Regulatory landscape is evolving and requirements are becoming more stringent, compelling industry to constantly raise the bar and demonstrate higher levels of control. The integration of new technologies, especially digital, is transforming and accelerating how we develop and introduce new products and services to the market.

As a result, we will continuously contribute to improve the quality of our products and services, look for new opportunities for growth, increase productivity and efficiency.

We, the Global Quality Senior Leadership Team, are ready for these challenges.

To achieve this paradigm shift, full alignment with Sanofi's values is required: we will be courageous to act for change and innovation, working closely and in agile mode with operational functions, leveraging the diversity of our collective skills and experiences, respecting the voice of our customers, and ensuring integrity in every decision we make, keeping our Quality Fundamentals close to heart.

To achieve this transformation, we want to engage each and every one of you to realize our Sanofi Quality Vision of becoming an industry leader in quality, compliance and performance.

Our strategic orientation for Play to Win is founded around four key pillars. These pillars are paramount to achieving our vision and, as such, we are committed to these for the future of Sanofi.

Each of these four pillars form the basis of our priorities. They are further detailed in our Quality Roadmaps which describe the important steps established to reach our vision and achieve success.

fully committed to ensuring that our vision for quality is realized. We collectively have a role to play to achieve this goal as indicated in our Global Quality Policy: "Thanks to the individual commitment of all to this Quality Mindset, combining collective ambition and individual humility at all levels of Sanofi, we will be empowering life".

We, the Global Quality Senior Leadership team, are
